

Implementing the XPage Extension Library

Paul T. Calhoun
Director of Worldwide Enablement
GBS

Obligatory Introduction Slide

- Paul T. Calhoun
Director of Worldwide Enablement
GBS
- Have attained Notes/Domino 6, 7, and 8
PCLI and PCLP certification
- Currently build Domino, Web, Java, XML, and XPage applications for
customers using Domino
- Co-author of the IBM Redbook “XML Powered by Domino,” and have
developed several online XML, Java, and XPages programming
courses
- Have written articles for both “THE VIEW” and “The Sphere” technical
publications

What we are going to talk about

- **Installing the Extension Library**
- Configuring DDE to test Extension Library Pages
- Developing XPages with the Extension Library
- Deploying Extension Library Apps to the Domino Server
- Wrap up

Why use the Extension Library

- The benefits of the Extension Library include...
 - Easier access to “standard” Dojo controls
 - Validation Control
 - Number Spinner
 - Slider
 - Etc..
 - Easier implementation of OneUI v2 layout

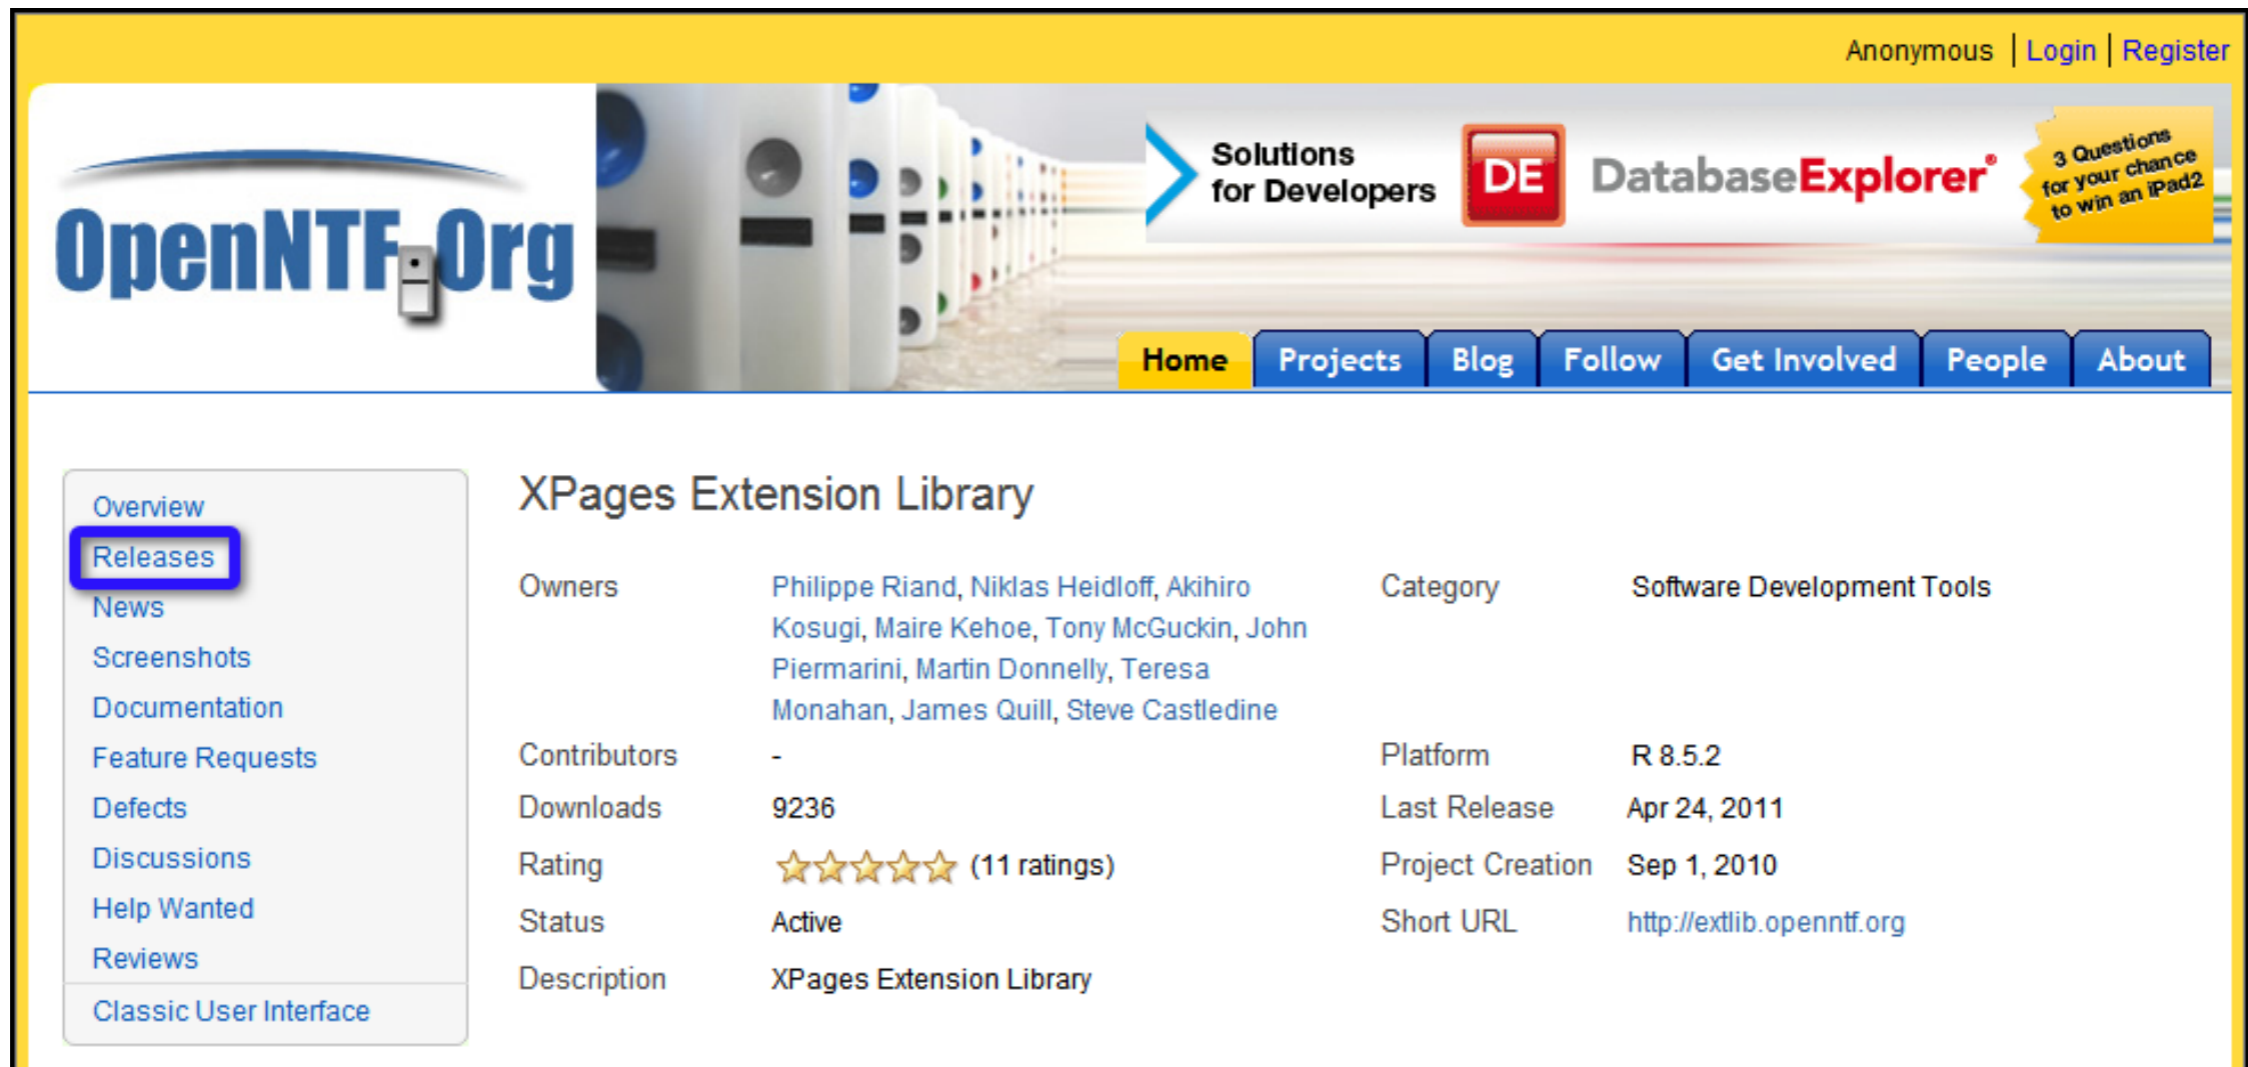

Before you get started...

- Starting your XPage adventure with the Extension Library is neither a good idea OR a best practice
- Before implementing and adding Extension Library functionality to you applications, make sure that...
 - You are WELL grounded in CORE XPage development skills which includes
 - Notes and Domino data architecture
 - XPage development and execution
 - CSS and Themes
 - JavaScript – Both Client Side and Server Side
 - XML
 - HTML

Installing the Extension Library

- The Extension Library project is available from OpenNTF
 - www.openntf.org
- Current downloads are available from the

The screenshot shows the OpenNTF website interface. At the top right, there are links for "Anonymous", "Login", and "Register". The main header features the "OpenNTF.Org" logo on the left, a navigation menu with "Home", "Projects", "Blog", "Follow", "Get Involved", "People", and "About" in the center, and a banner for "Solutions for Developers Database Explorer" on the right. A yellow callout box on the banner says "3 Questions for your chance to win an iPad2".

The main content area displays the "XPages Extension Library" project page. On the left, there is a sidebar menu with "Releases" highlighted. The main content area shows the following details:

Owners	Philippe Riand, Niklas Heidloff, Akihiro Kosugi, Maire Kehoe, Tony McGuckin, John Piermarini, Martin Donnelly, Teresa Monahan, James Quill, Steve Castledine	Category	Software Development Tools
Contributors	-	Platform	R 8.5.2
Downloads	9236	Last Release	Apr 24, 2011
Rating	★★★★★ (11 ratings)	Project Creation	Sep 1, 2010
Status	Active	Short URL	http://extlib.openntf.org
Description	XPages Extension Library

XPages Extension Library - Releases

Release Date	Author	Name	Downloads	Direct download
Jul 25, 2011	Philippe Riand	8.5.3.201107241623NTF	116	
<u>Jul 25, 2011</u>	Philippe Riand	8.5.2.201107241623NTF	58	
Jul 21, 2011	Philippe Riand	8.5.3.201107211551NTF	146	
Jul 21, 2011	Philippe Riand	8.5.2.201107211551NTF	71	XPagesExtensionLibrary-852.zip
Jul 5, 2011	Philippe Riand	8.5.3.201106291654NTF	683	XPagesExtensionLibrary-853.zip
Jul 5, 2011	Philippe Riand	8.5.2.201106291654NTF	283	XPagesExtensionLibrary-852.zip
Jun 27, 2011	Philippe Riand	8.5.2.201106270952NTF	270	XPagesExtensionLibrary-852.zip
Jun 14, 2011	Philippe Riand	8.5.2.201106142303NTF	484	XPagesExtensionLibrary-852.zip

Pay Attention to the Version

IamLUG

Installation files

- The download of the Extension Library is a zip archive file
- Extract the contents to an accessible folder
 - Files can be extracted to a common share point for access by multiple developers
- The Extension Library is deployed as an Eclipse Update Site
 - The update site is contained in the updateSite.zip file
 - This file DOES NOT need to be unzipped to perform the install

Name	Size	Type	Date Modified	Attributes
ExtLib-Notes85.zip	1 KB	WinZip File	8/20/2010 4:31 PM	A
LICENSE	12 KB	File	1/20/2009 3:54 PM	A
NOTICE	1 KB	File	9/14/2010 8:11 PM	A
src.zip	2,282 KB	WinZip File	4/23/2011 12:41 PM	A

XPages Extension Library Documentation.pdf	1,174 KB	Adobe Acrobat Doc...	11/21/2010 9:58 PM	A
XPages-Doc.zip	936 KB	WinZip File	2/28/2011 12:23 PM	A
XPagesExt.nsf	3,072 KB	IBM Lotus Notes dat...	4/23/2011 12:27 PM	A

Installation files

- The download also contains
 - A sample application (nsf)
 - Documentation
 - An instance of the XPages-Doc API documentation

Installing the Plug-in in DDE

- The Extension Library is an Eclipse plug-in that is installed into Domino Designer on Eclipse (DDE)
- Pre-requisites
 - The supported Version of DDE and Domino are 8.5.2
 - Both the DDE and target Domino Servers must be running version 8.5.2
 - Fixpak 1 and 2 are not required but generally a good idea
 - There are now versions of the Extension Library for 8.5.3

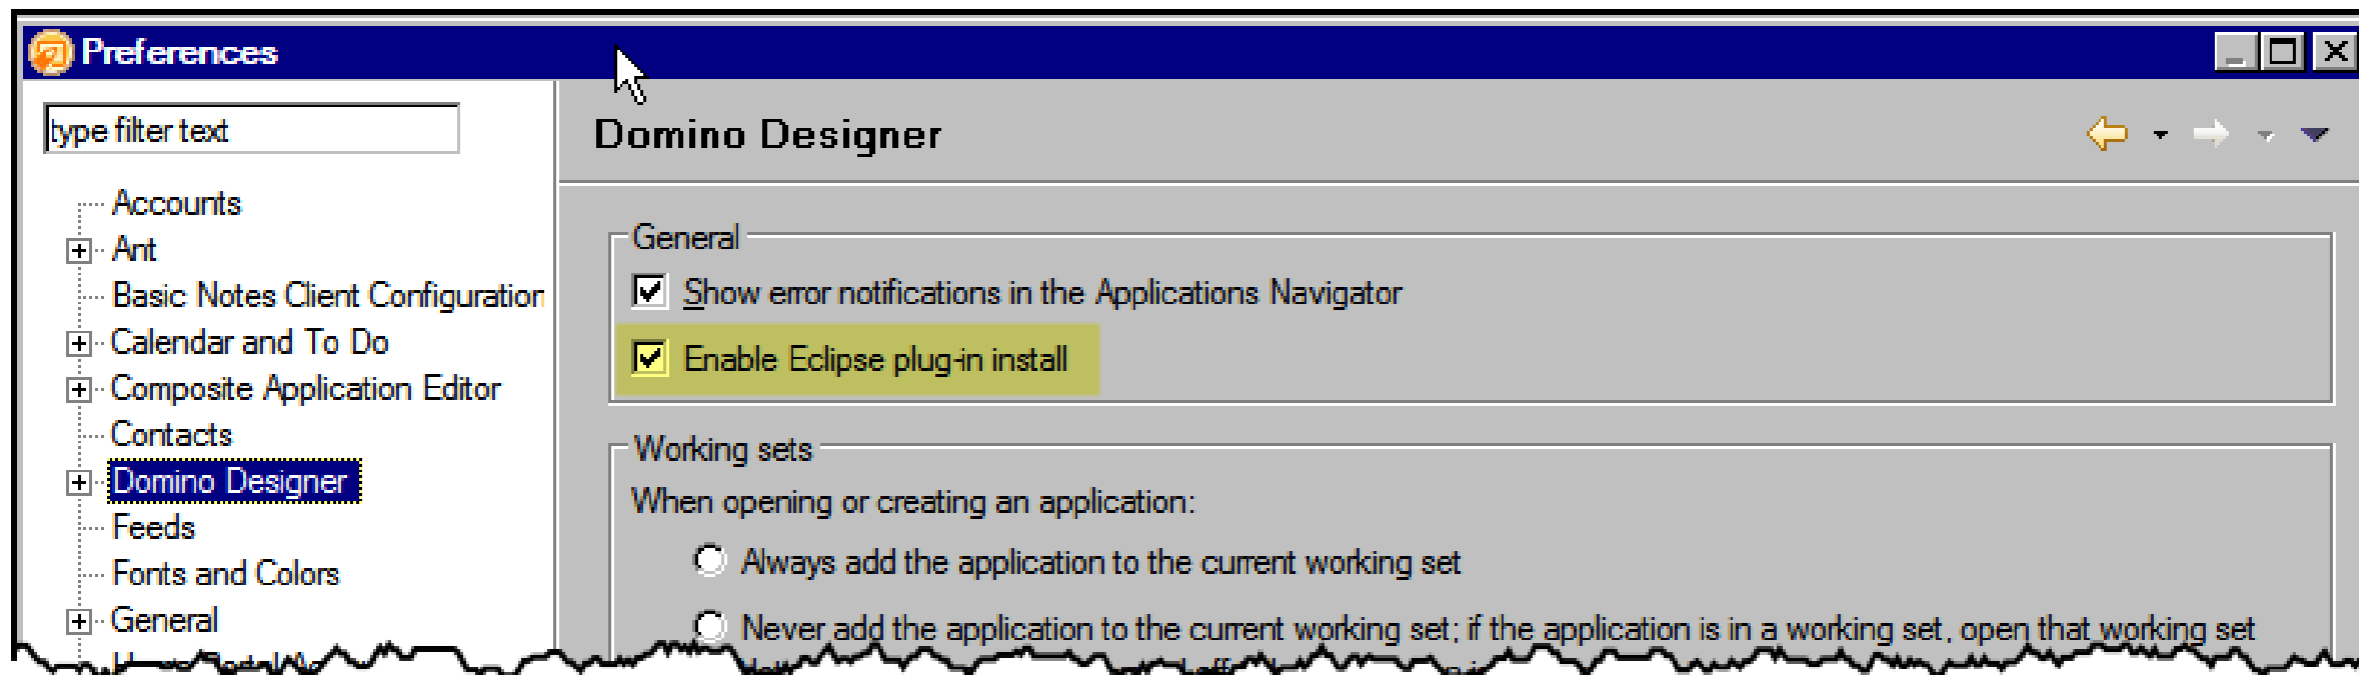

Installing the Plug-in in DDE

- Enable DDE to install Eclipse plug-ins
- In DDE choose File | Preferences
- In the Preferences dialog box choose “Domino Designer”

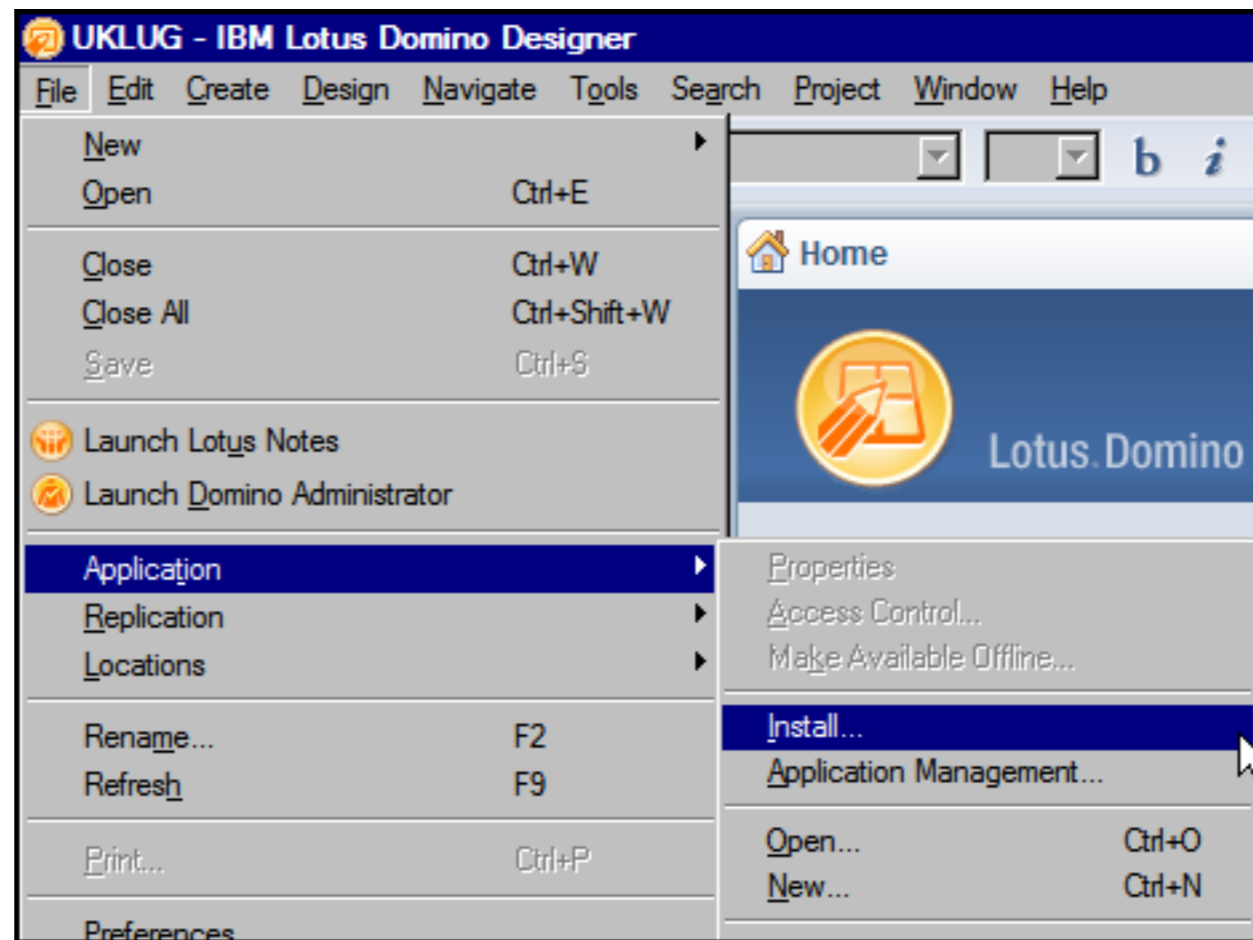

Installing the Plug-in in DDE

- In the General section check the “Enable Eclipse plug-in install” preference
 - This will enable the menu option in DDE to install Eclipse plug-ins
- Click OK to save the preferences

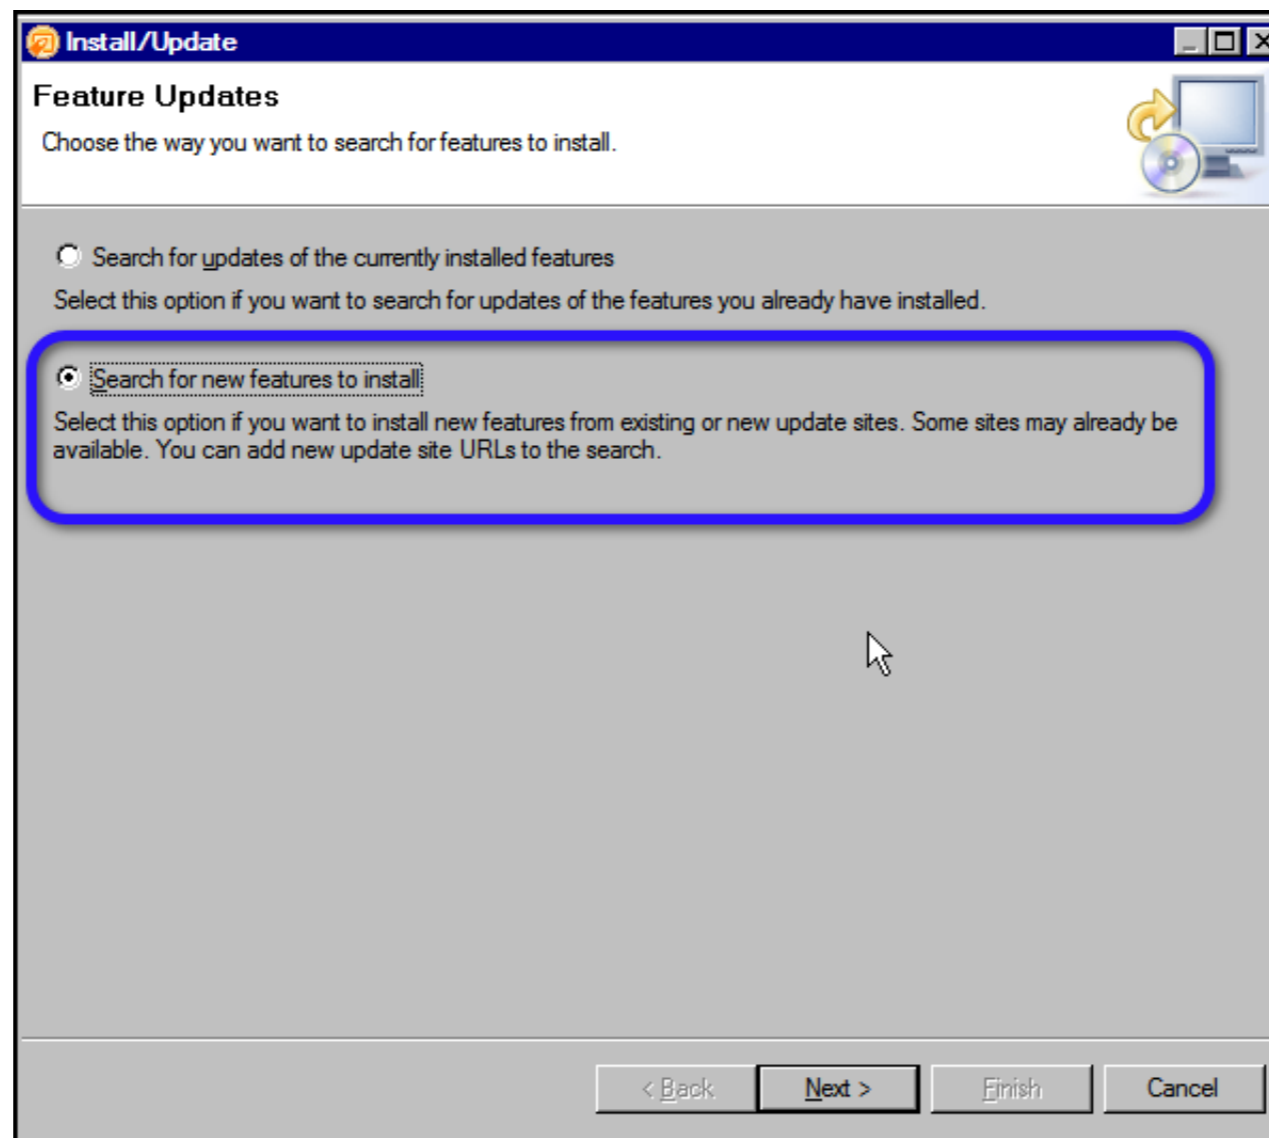

Installing the Plug-in in DDE

- From the File menu choose Application | Install

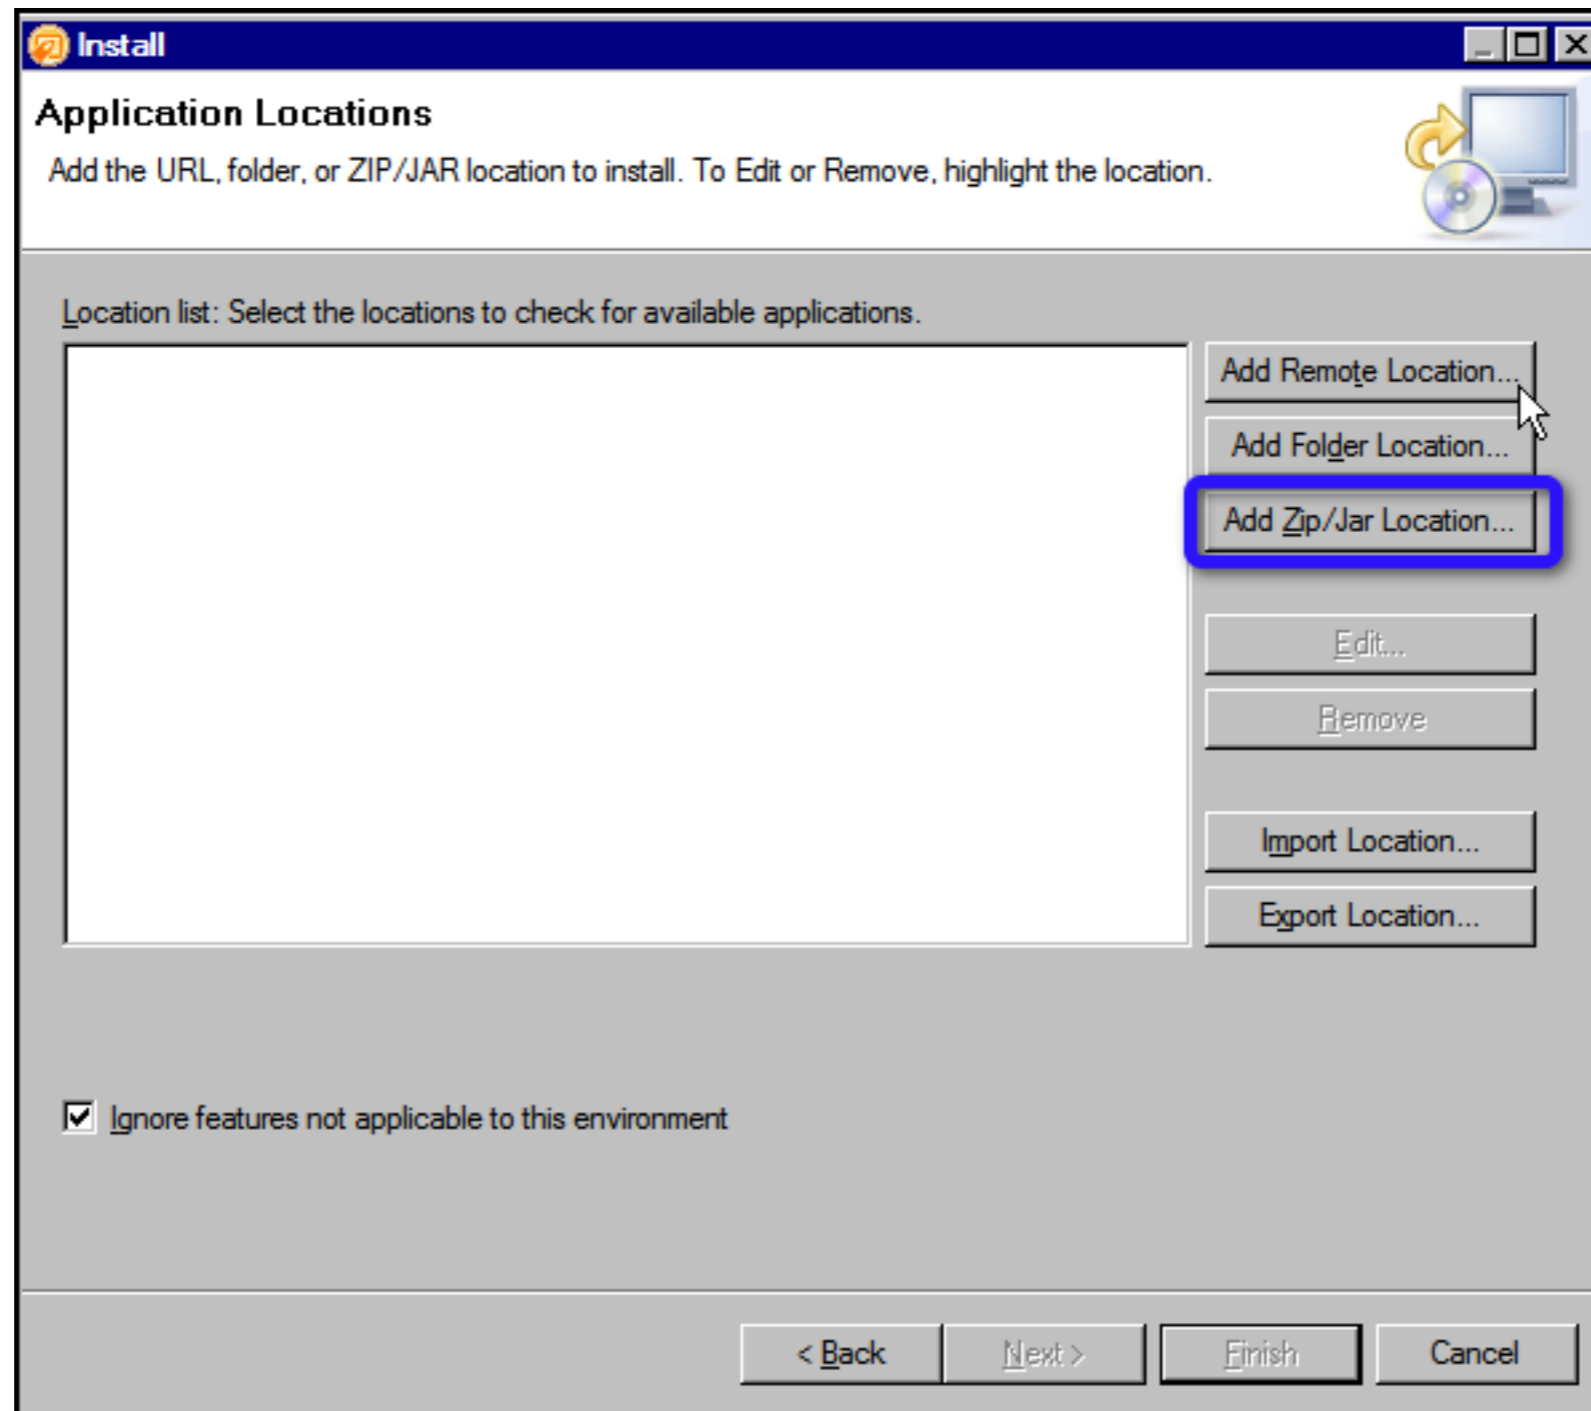

Installing the Plug-in in DDE

- In the Install/Update dialog box...
- Select “Search for new features to install”
- Click the Next button

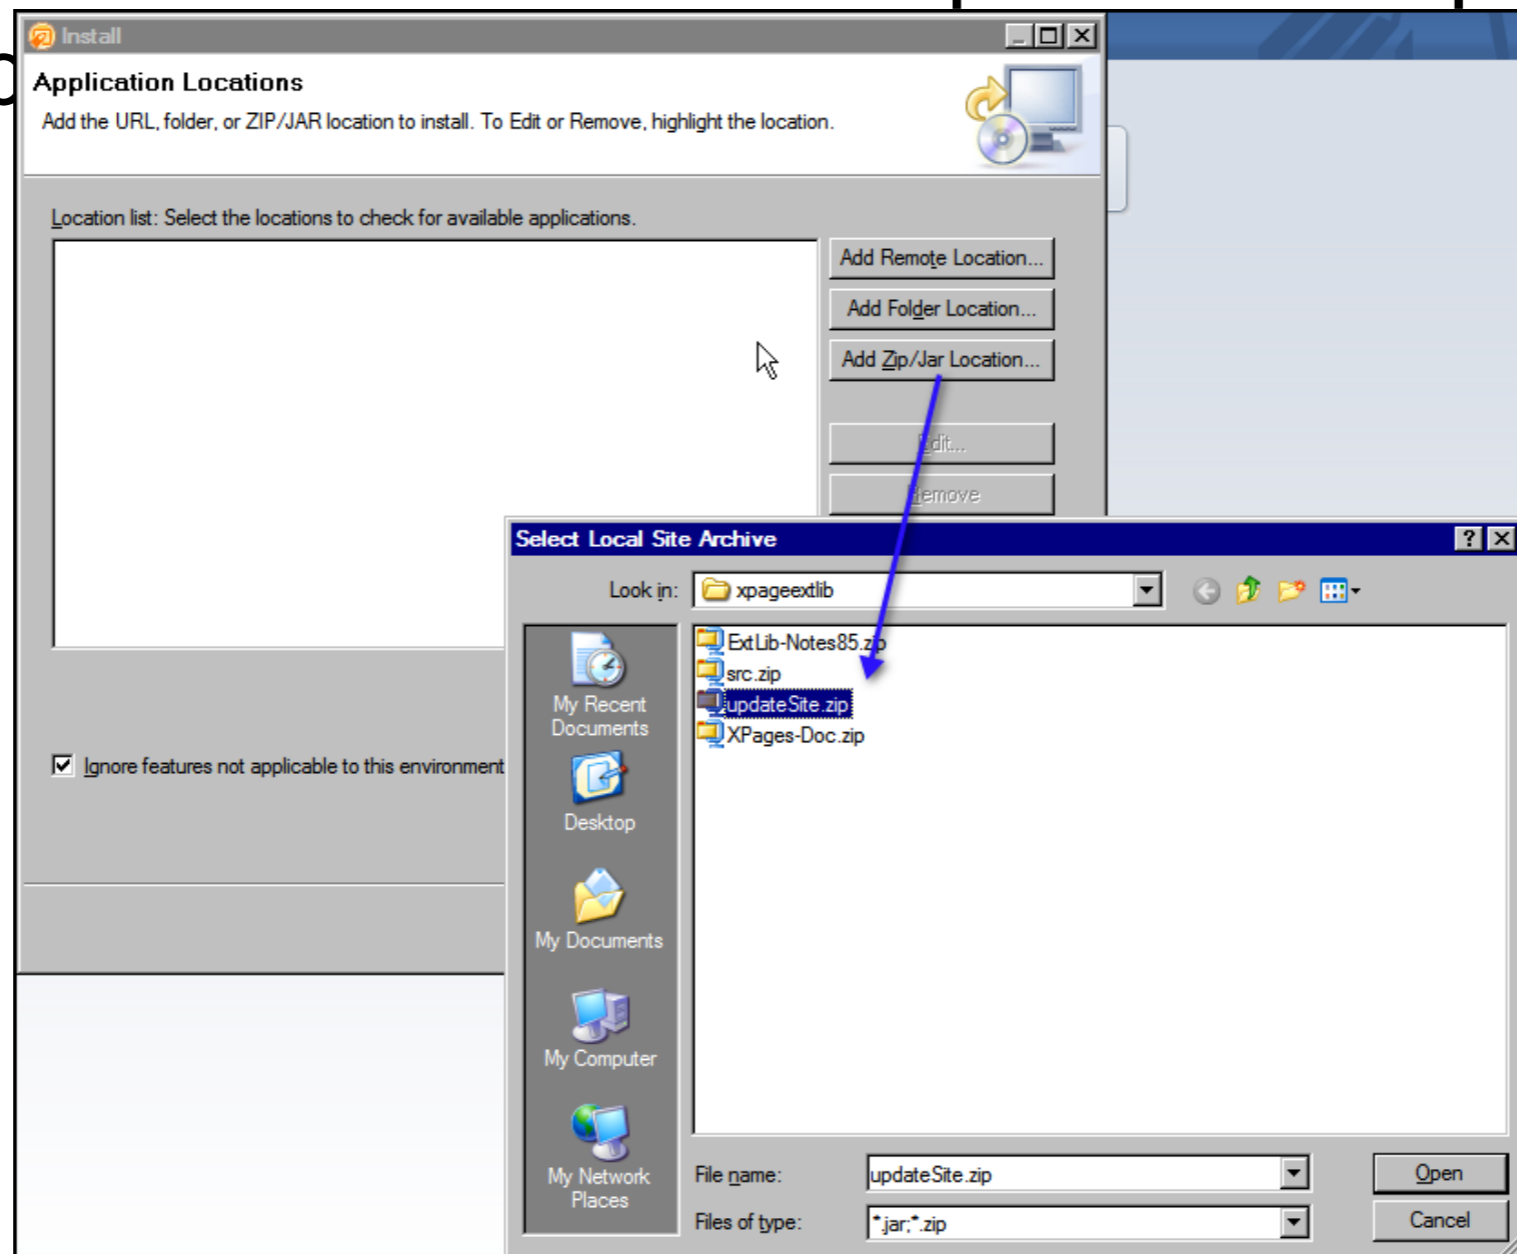

Installing the Plug-in in DDE

- In the Install dialog click on the “Add Zip/Jar location...” button

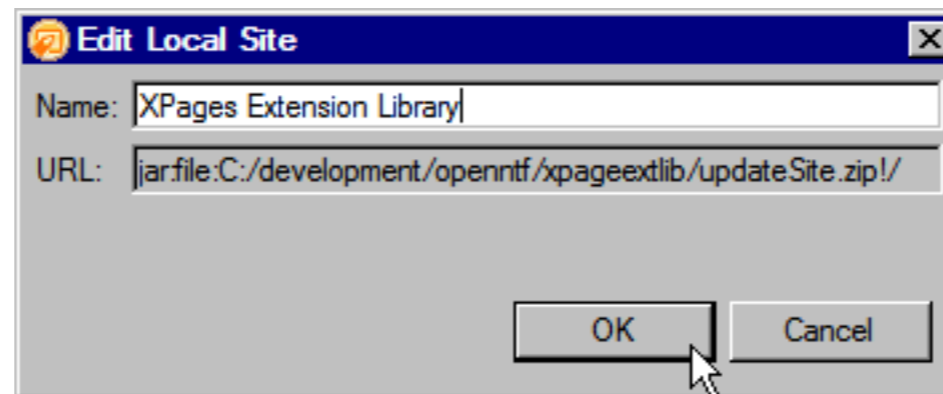

Installing the Plug-in in DDE

- In the Select Local Site Archive dialog...
- Navigate to the folder where the Extension Library files were extracted and choose the updateSite.zip file and click the Open button

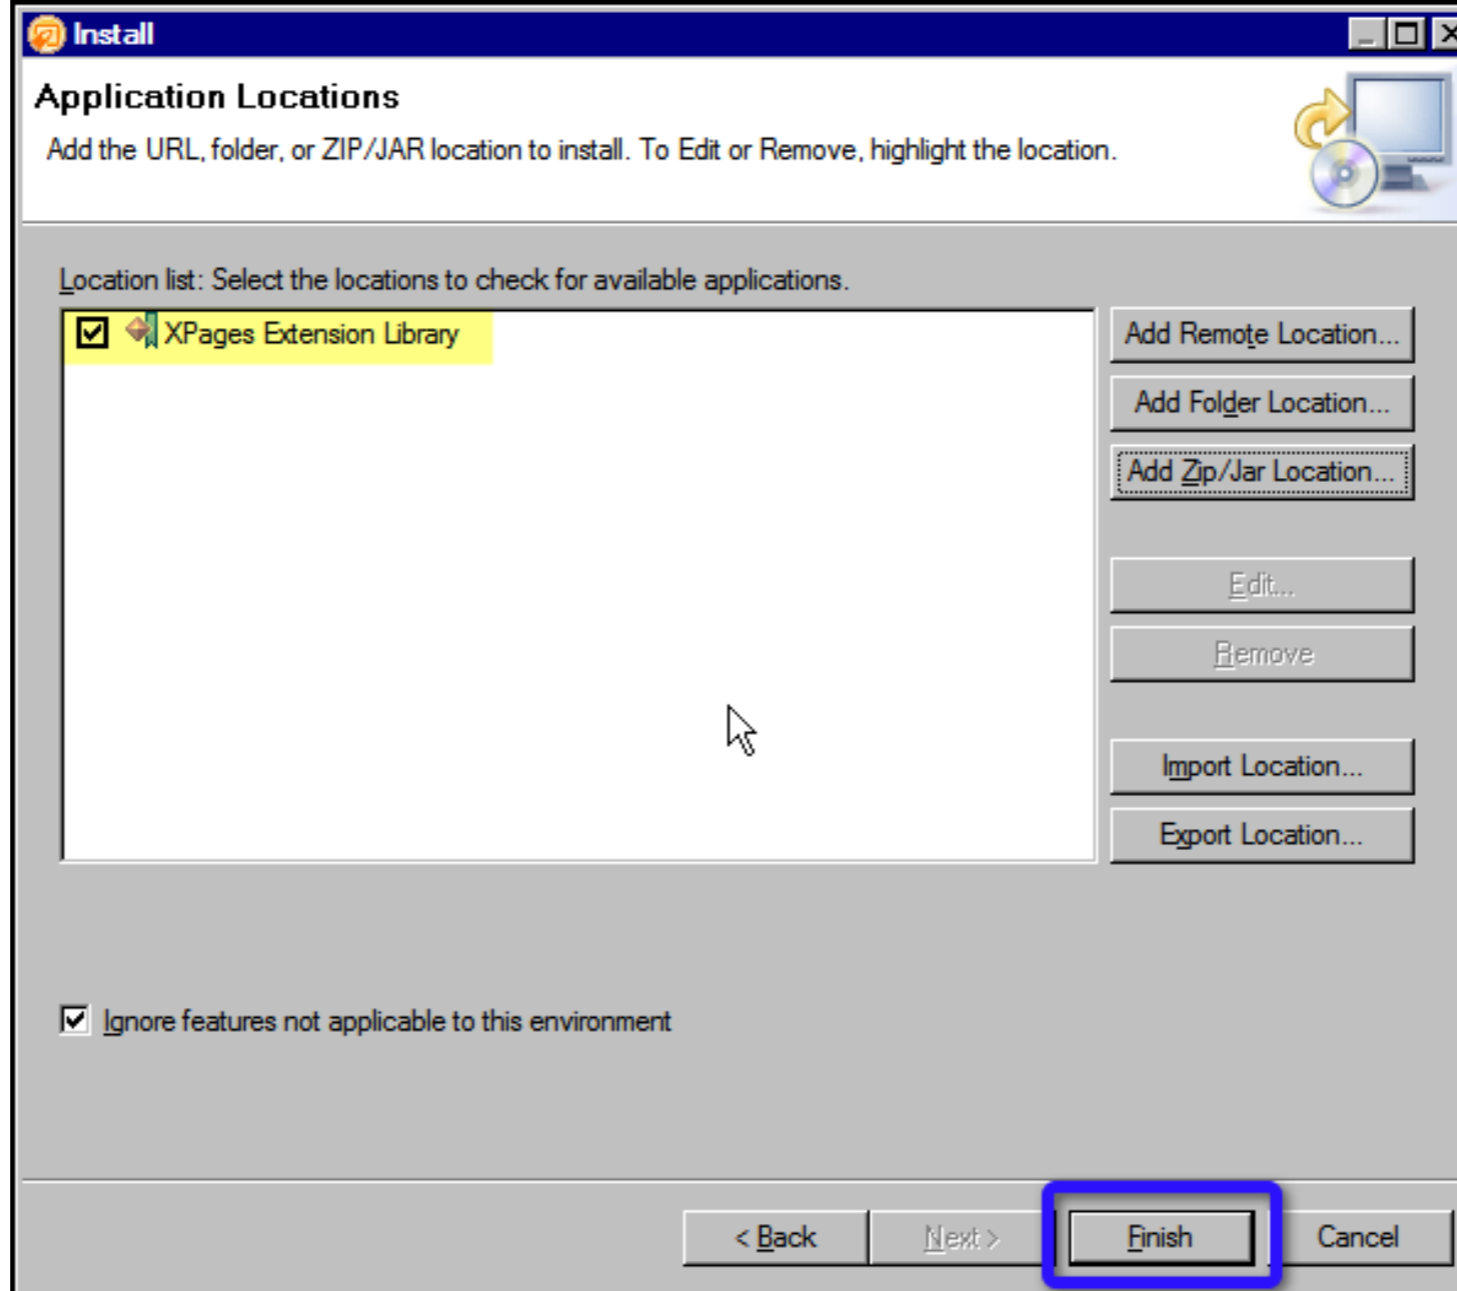

Installing the Plug-in in DDE

- In the Edit Local Site dialog box...
- Optionally edit the name of the plug-in being installed and click the OK button

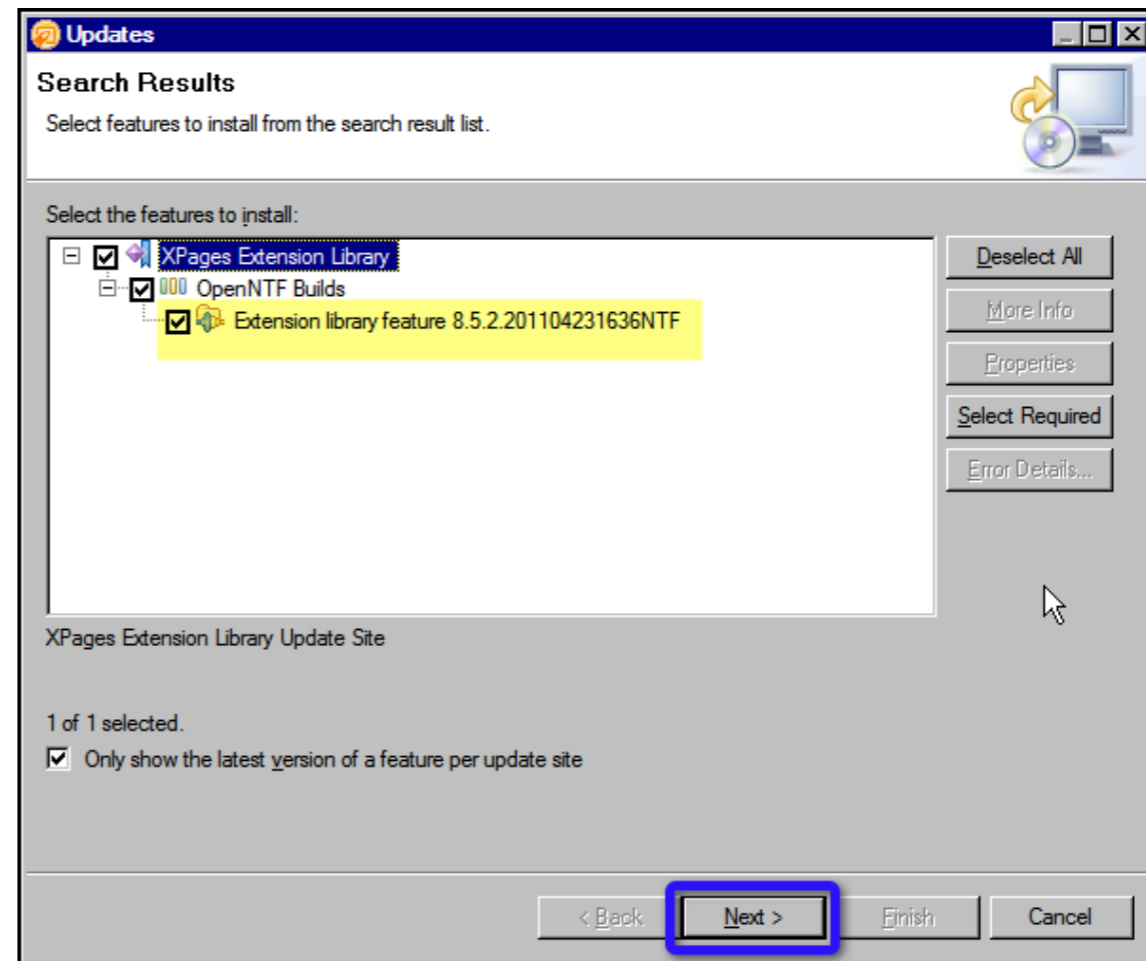

Installing the Plug-in in DDE

- This will add the Extension Library site to the list of update sites
- Click the “Finish” button to start the plug-in installation

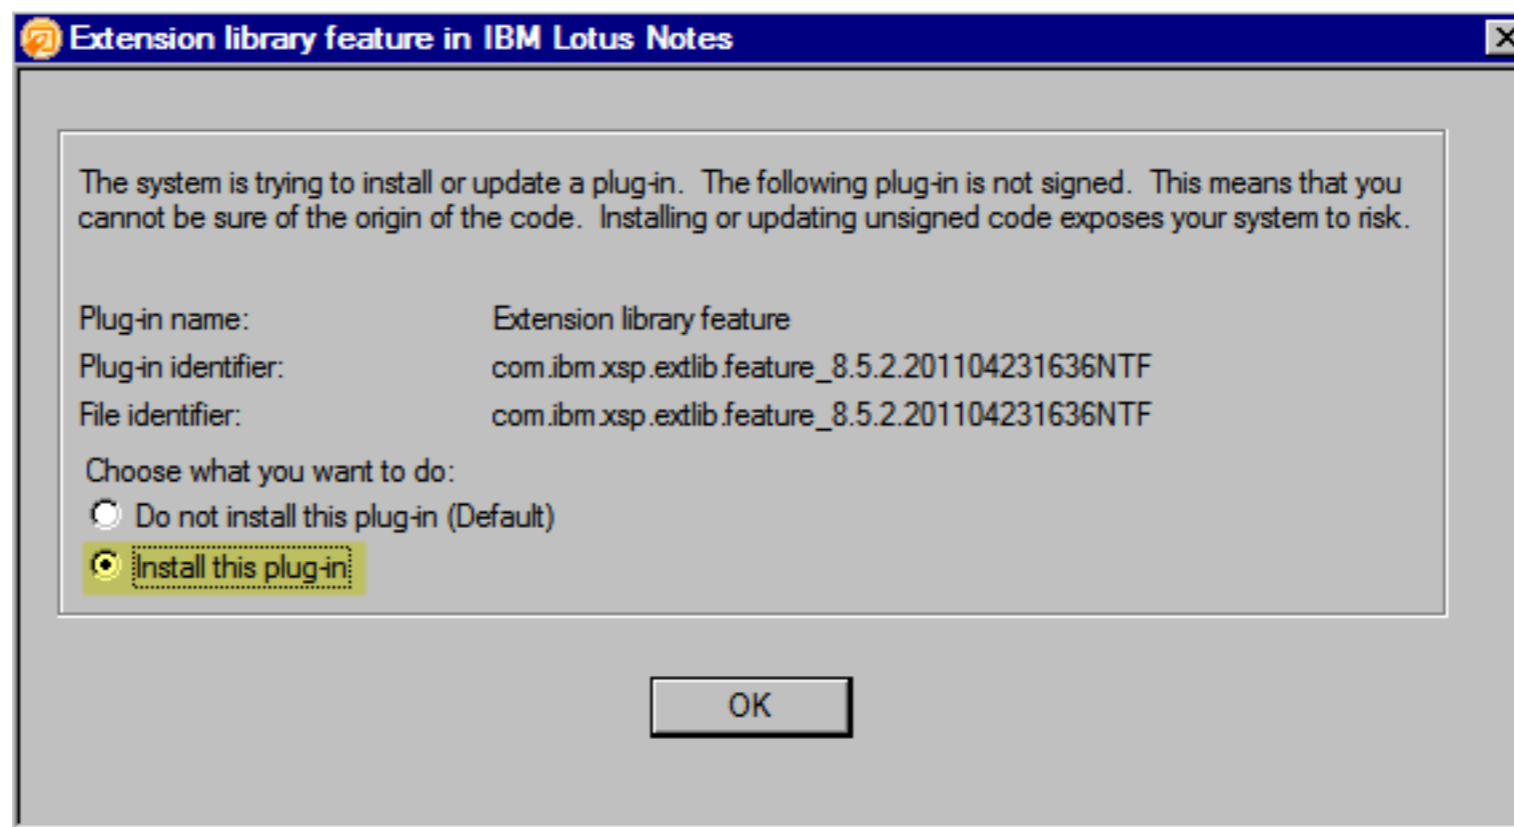

Installing the Plug-in in DDE

- In the Search Results dialog box...
- Optionally expand the hierarchy to display the features to be installed
- Check the Extension Library feature
- Click the Next button

Installing the Plug-in in DDE

- A dialog box will open prompting to install the plug-in
- Select the “Install this plug-in” radio button
- Careful here as the default is to NOT install the plug-in and inadvertently click the OK button will not install the plug-in

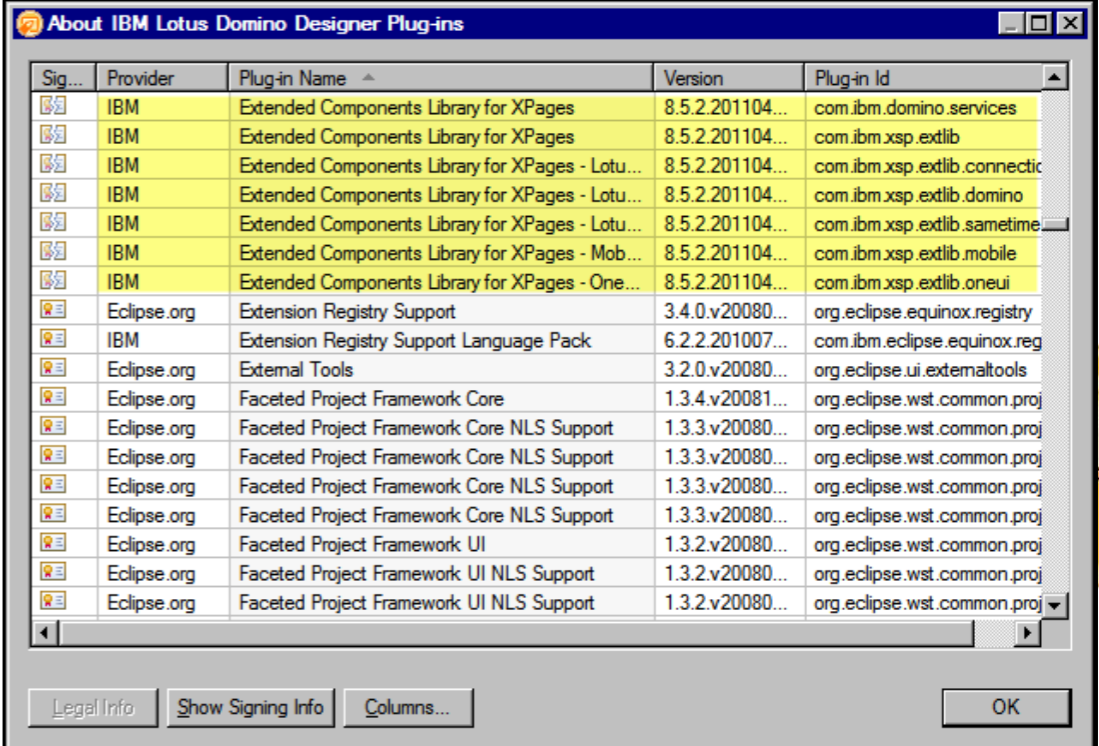

Installing the Plug-in in DDE

- After the plug-in is installed...
- A prompt will appear in the lower right hand corner prompting you to restart the Notes/Designer client
 - This prompt only appears for a couple of seconds and is easy to miss
 - The Extension Library plug-ins will not be available until DDE and the Notes Client (if it is running) are restarted
 - If you miss this prompt...
 - Restarting DDE and the Notes client manually will accomplish the same result

Verifying the Installation

- Once the Notes Client and DDE have restarted the installation of the plug-in can be verified by ...
- In DDE choose Help | About IBM Lotus Domino Designer
- In the dialog box that opens click on the Plug-in Details button at the bottom
- In the dialog box that opens sort the plug-ins by Plug-in Name by clicking on the column
- Scroll to the Extended... section

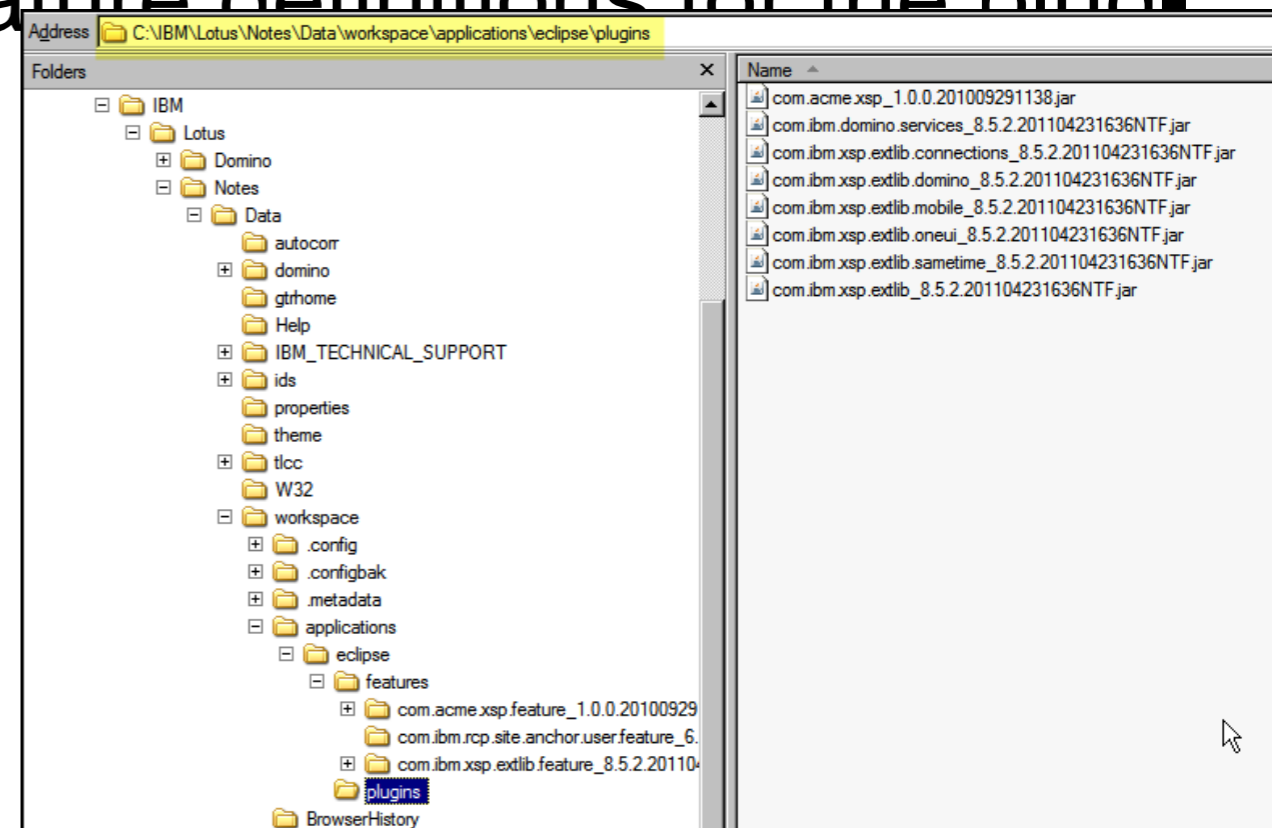

Sig...	Provider	Plug-in Name	Version	Plug-in Id
	IBM	Extended Components Library for XPages	8.5.2.201104...	com.ibm.domino.services

	Eclipse.org	Faceted Project Framework UI NLS Support	1.3.2.v20080...	org.eclipse.wst.common.proj
	Eclipse.org	Faceted Project Framework UI NLS Support	1.3.2.v20080...	org.eclipse.wst.common.proj

Verifying the Installation

- At the OS level in File Explorer navigate to the following folder structure
 - <DDE Install directory>\Data\workspace\applications\eclipse
- There are two folders here
 - Features - Contains the feature definitions for the plug-ins
 - Plugins - Contains the jars that comprise the plug-ins

Updating the Extension Library

- New versions of the Extension Library are posted periodically
- To update the installed version of the Extension Library...
 - Download and extract the updated Extension Library components
 - In DDE, choose Application | Install
 - Choose Search for updates to the currently installed Features
 - The application installer will recognize a new version of the Extension library is available and will prompt you to complete the update

What we are going to talk about

- Installing the Extension Library
- **Configuring DDE to test Extension Library Pages**
- Developing XPages with the Extension Library
- Deploying Extension Library Apps to the Domino Server
- Wrap up

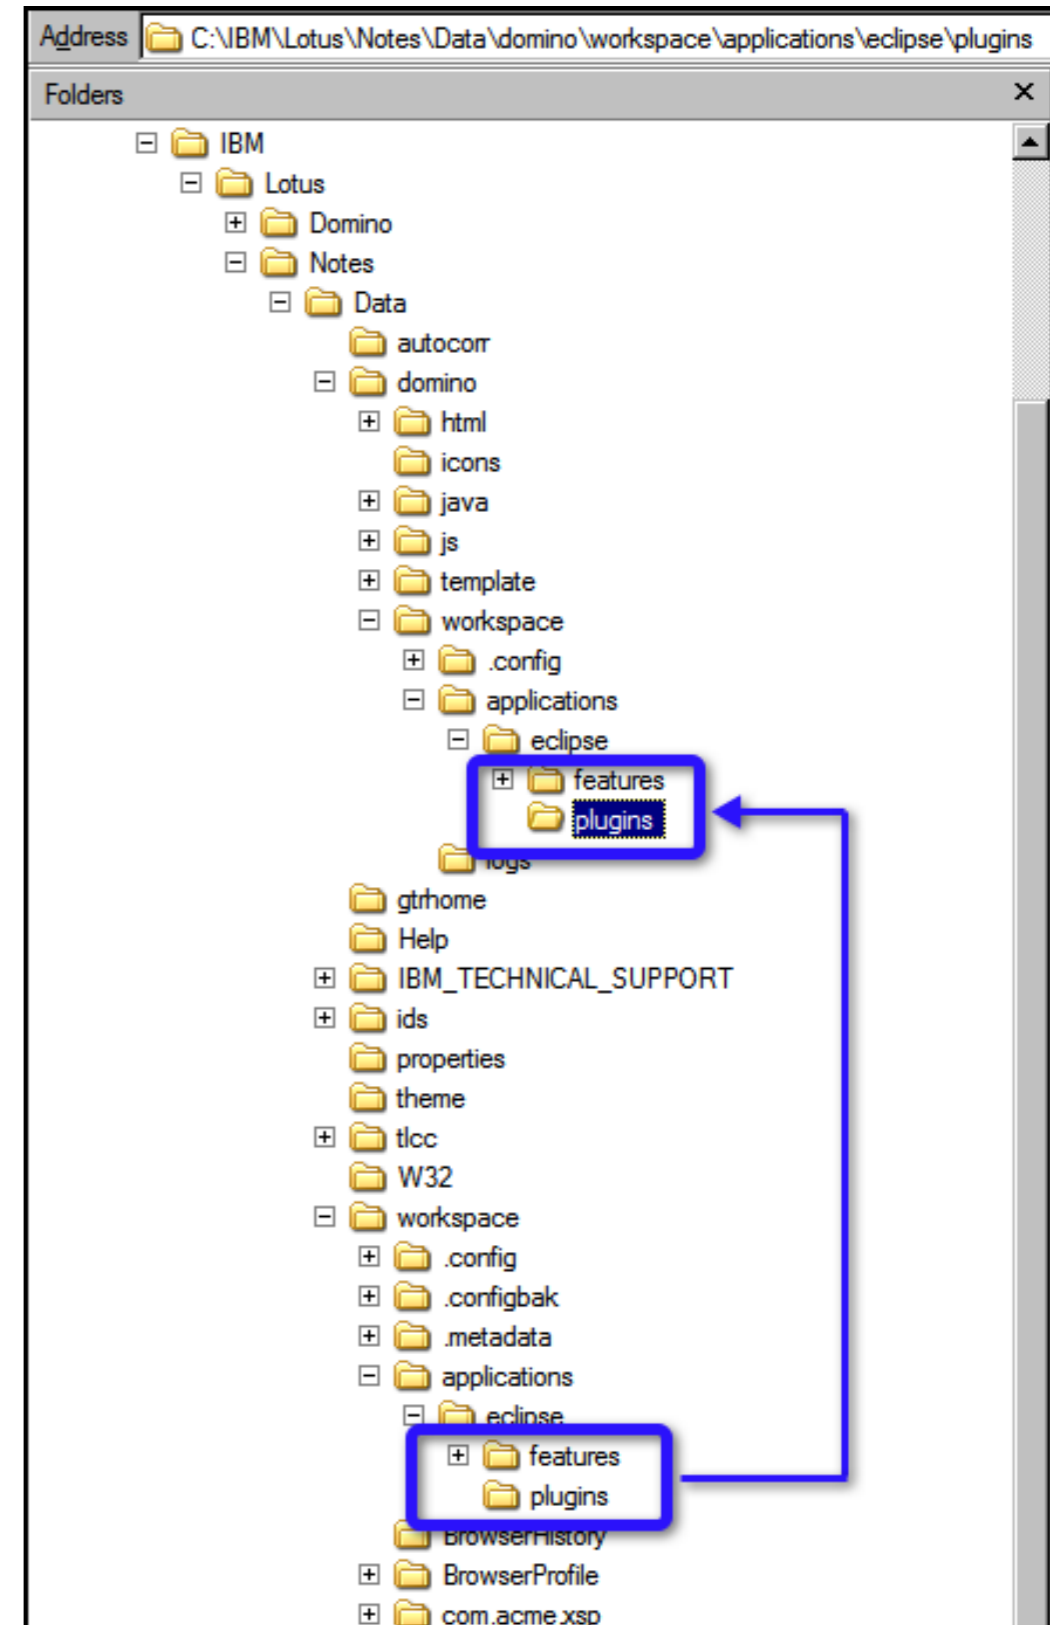

What you can do post installation

- After installing the plug-in you can create and test applications that use the Extension Library
 - But ONLY from XPiNC (XPages in the Notes Client)
- Applications that use the Extension Library can not be previewed using DDE's local web preview until the plug-ins have been "deployed"
- To deploy the plug-ins they must be either...
 - Manually copied from the plug-ins folder to the proper folder
 - The contents of the updateSite.zip file must be extracted to the proper folder

Deploying the Extension Library

- Copy the features and plugins folder from
<installdir>\data\workspace\applications\
eclipse\
 - To
<installdir>\data\domino\workspace\
applications\eclipse\
 - Or
 - Unzip the contents of the
updateSite.zip file to the same location
 - DDE and the Notes client will have to be
restarted if they are running before the
plug-ins are available for web preview

Deploying to the Domino Server

- The previous procedure is currently the same procedure used to deploy the Extension Library to the Domino Server
- Note that if the HTTP task is running it will have to be stopped in order to copy the jars
 - This is not required on the first deployment but IS required on any subsequent deployments as the HTTP task will have any referenced jar files locked
- Telling HTTP restart will NOT accomplish the re-loading of the jar files
 - The tell http quit and the load http server command lines must be used

Deploying to the Domino Server

- There is also a modified update site template available from OpenNTF that will deploy the extension library to the Domino Server without having to copy the jar files
- This is the best option for deploying the extension library in production !!!!

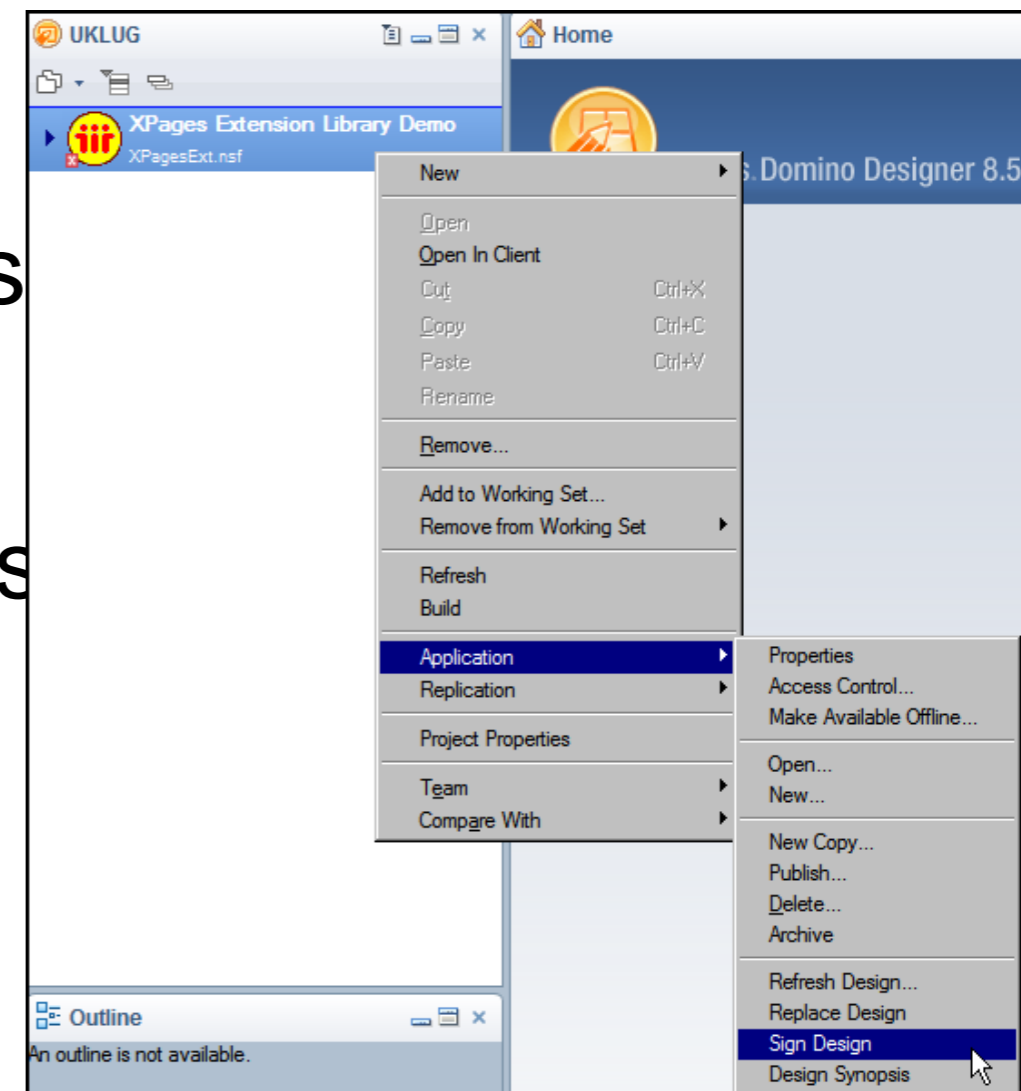

Testing the Extension Library

- The easiest way to test the Extension Library deployment both in DDE and on the Domino Server is to load sample XPages from the included sample file
- Copy the XPages Extension Library Demo (XPagesExt.nsf) to the local DDE data directory
 - Sign the application
 - Build the application (not really necessary but not a bad idea)
 - Edit the ACL to include you developer id
 - Create a new replica on the Domino test server

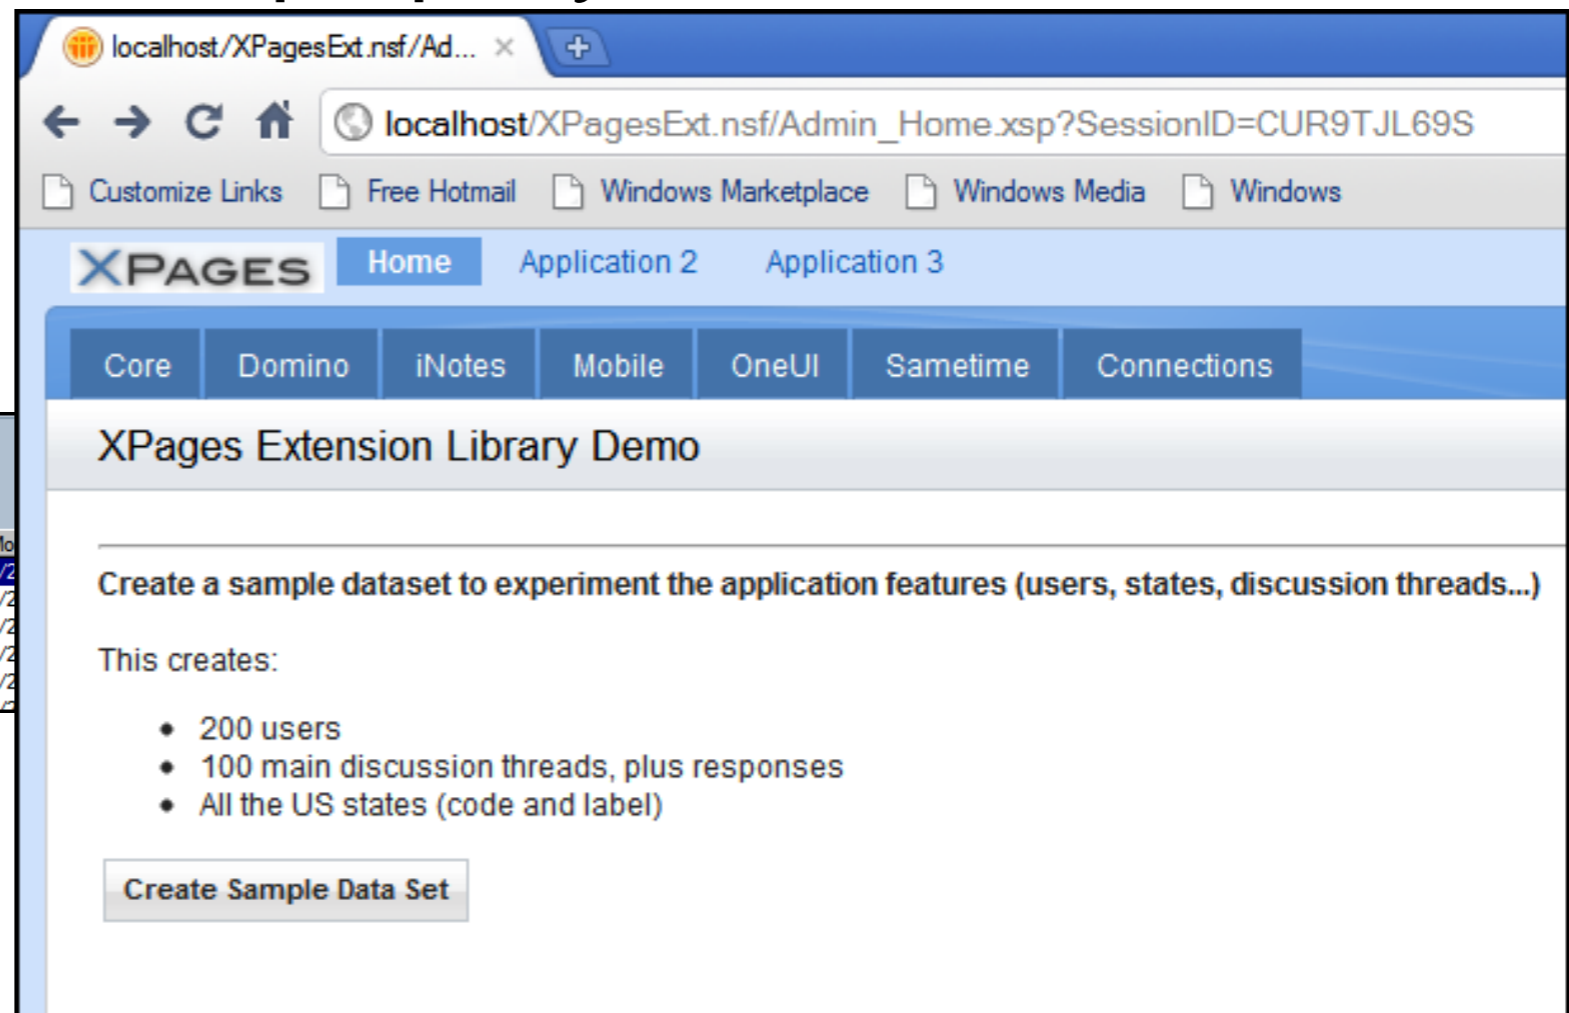

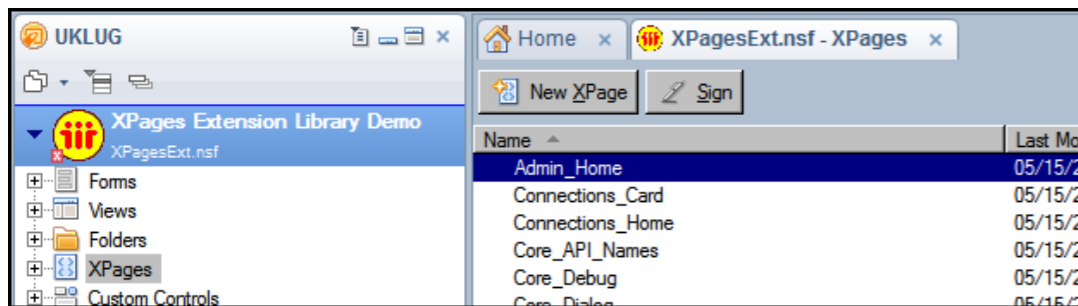

Signing the Application

- Add the Sample application to a working set in DDE
- Right click on the application and choose...
 - Application | Sign Design
- If under the project menu Build Automatically is enabled the Xpages and Custom Controls will also be compiled (built)
- If Build Automatically is NOT enabled the right click the applications and choose Build from the context menu

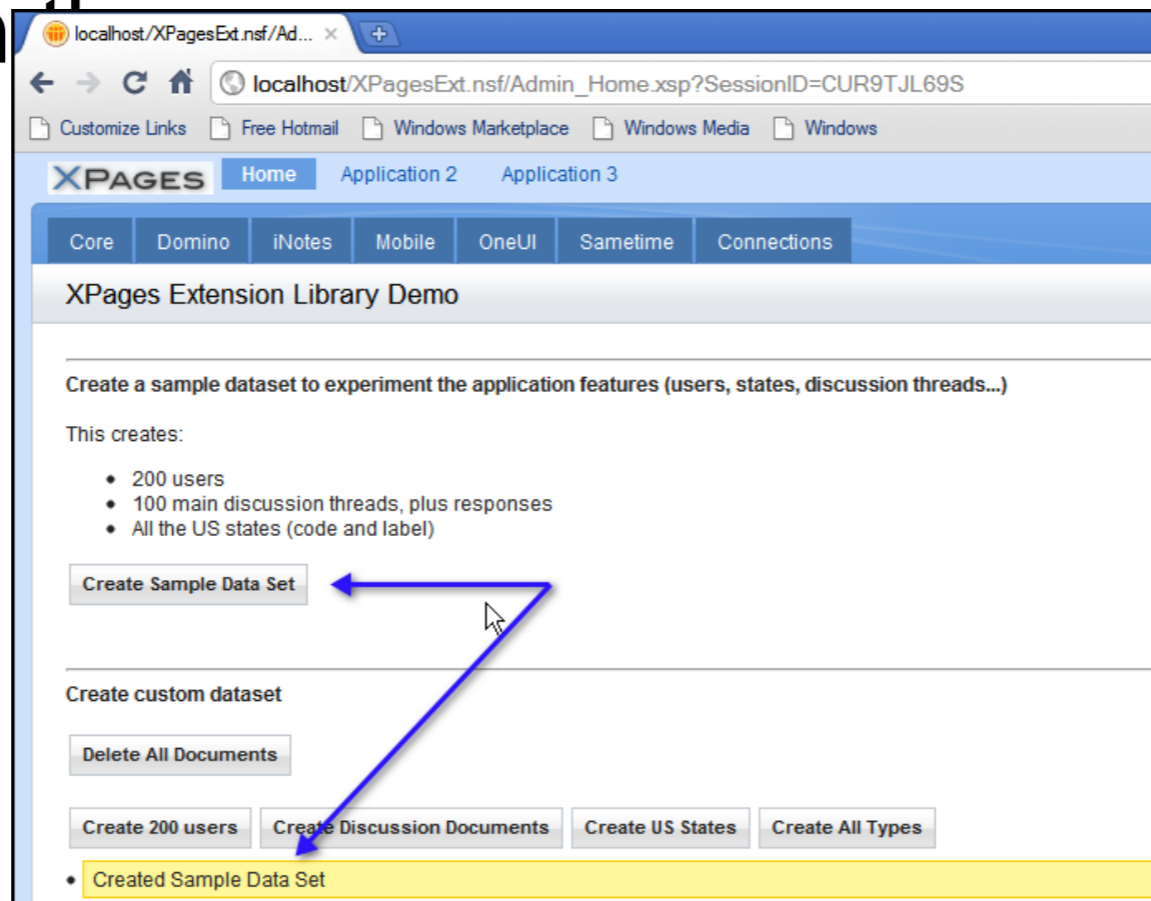

Testing the Extension Library

- Load the Admin_Home.xsp Xpage from DDE in XPiNC, or if you have deployed the plug-ins for DDE web preview, in the default browser
- If the Admin_Home.xsp Xpage load and displays the Extension Library is installed properly

Creating the Sample data

- The Sample Application comes with the ability to build sample data for the application to work with
- Preview the Admin_Home.xsp XPage from DDE and click on the Create Sample Data button
- This will create the sample documents and display a message on the screen

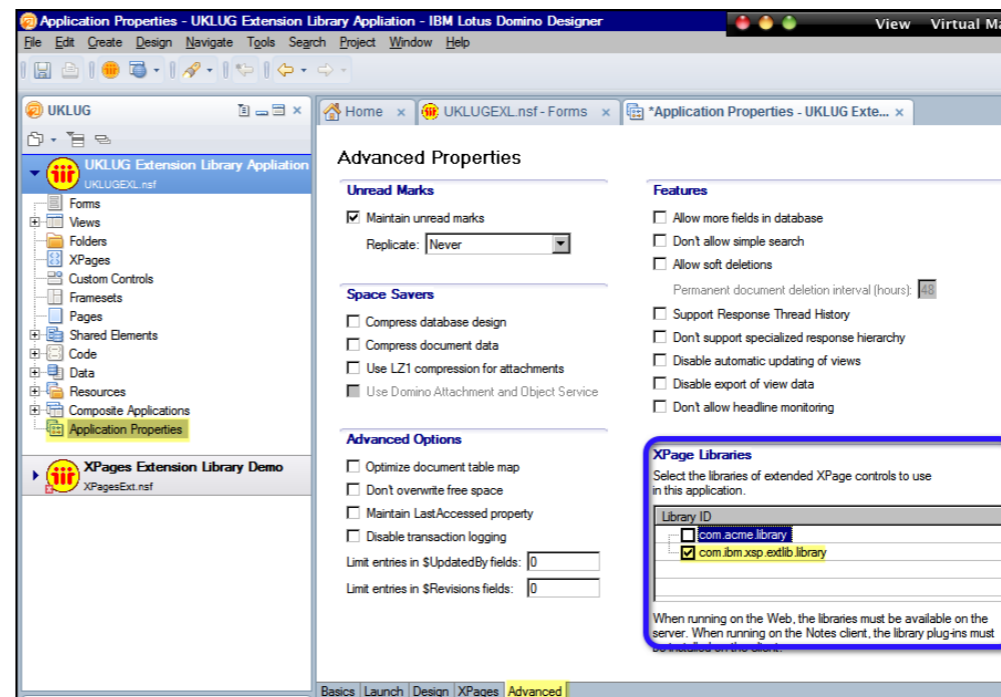

What we are going to talk about

- Installing the Extension Library
- Configuring DDE to test Extension Library Pages
- **Developing XPages with the Extension Library**
- Deploying Extension Library Apps to the Domino Server
- Wrap up

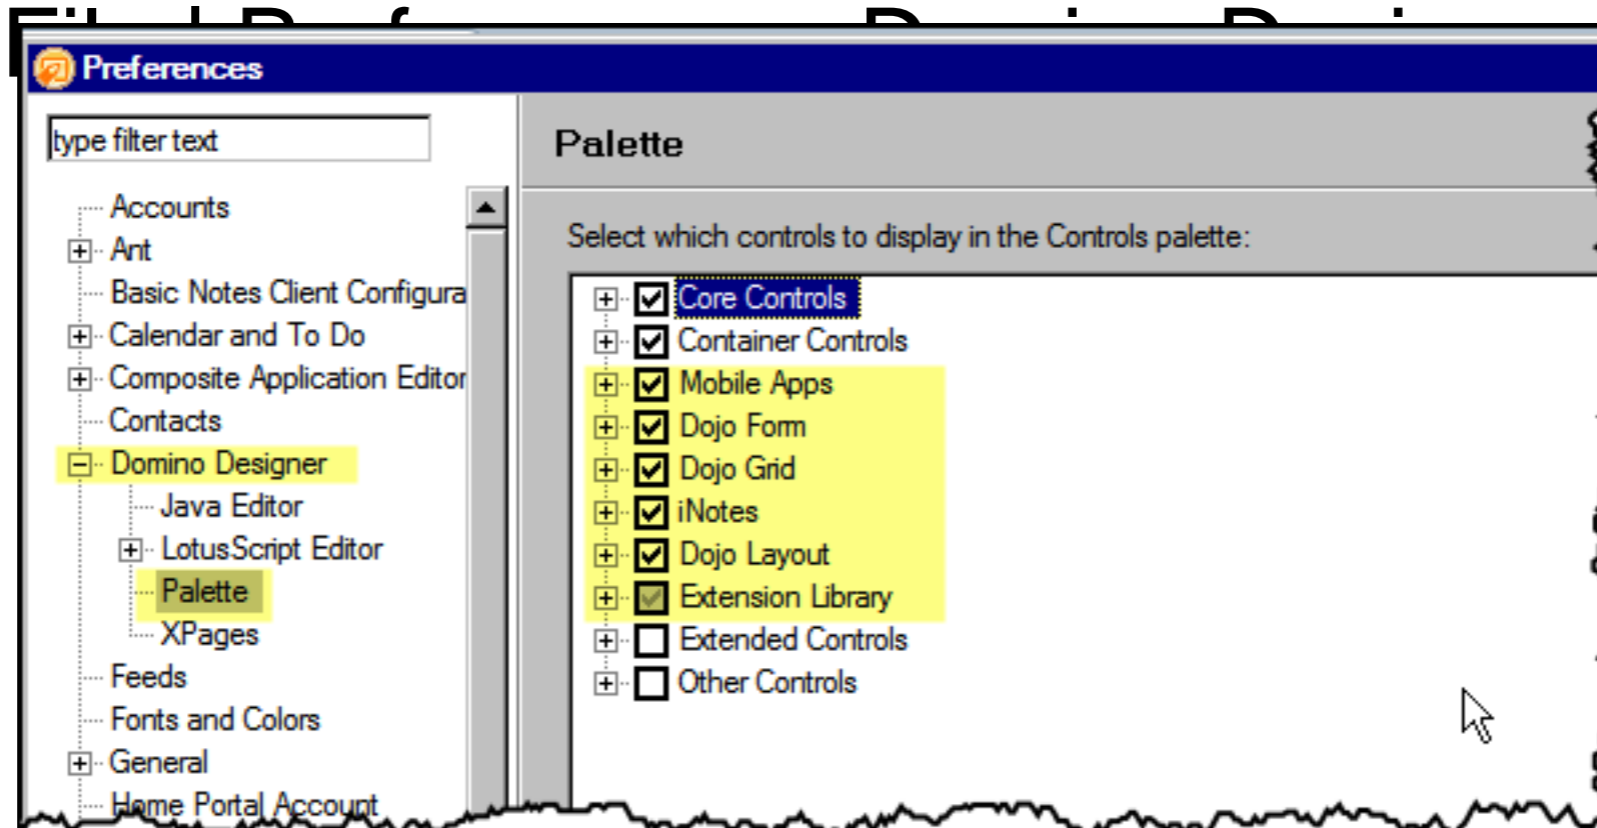

Application Properties

- The Application Properties of new or existing applications that will use components from the Extension Library should be set to reference the Extension Library libraries
- In the application navigator in DDE choose Application Properties
- On the Advanced Tab in Application Properties check the libraries that will be used in the XPage Libraries section

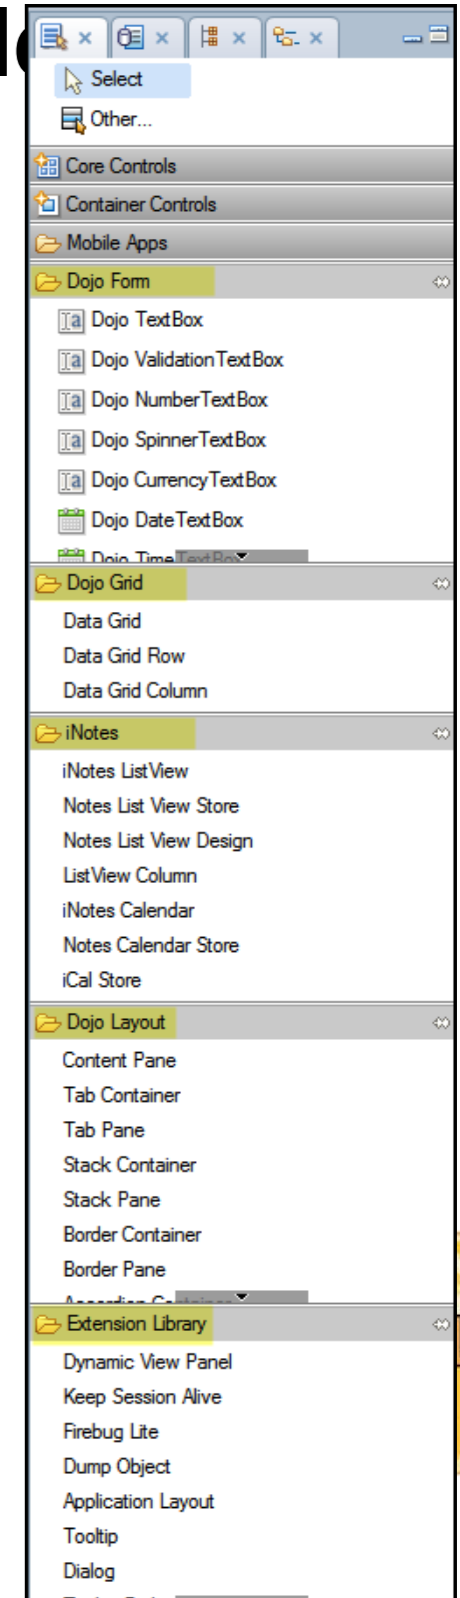

Extension Library Controls

- The Extension Library adds additional controls to the control palette available when creating/editing XPages
- Not all of the controls are listed in the control palette by default
- Enable the listing of controls in the control palette by choosing **File > Preferences > Domino Designer > Palette**

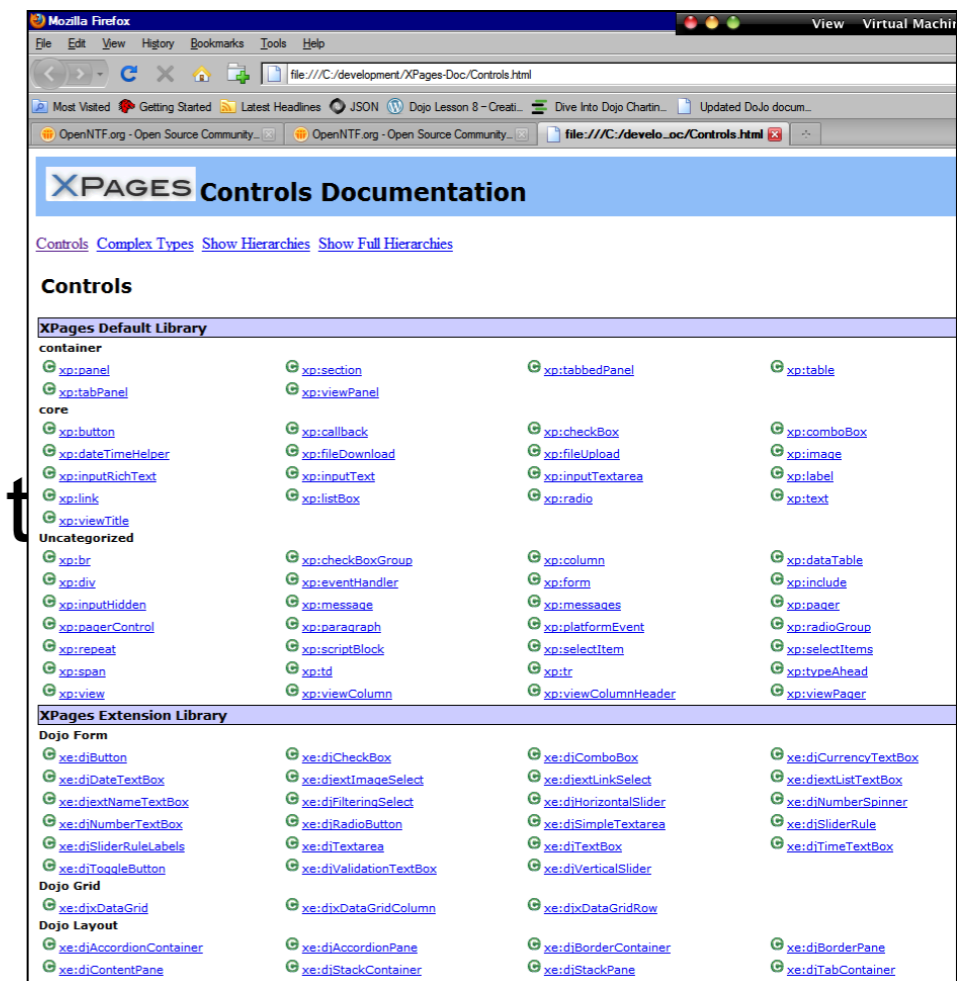

The Controls Palette

- When creating / editing an XPage the available Extension Library controls are now available on the controls palette

Extension Library API

- The XPages Extension Library API documentation is available by expanding the XPages-Doc.zip file that is included with the download from OpenNTF
- The API documentation includes the XPages default (core) controls as well as the XPages Extension library controls
- The API documentation is a series of html documents in the java doc format
- Use this documentation to learn about and discover the properties of a particular component

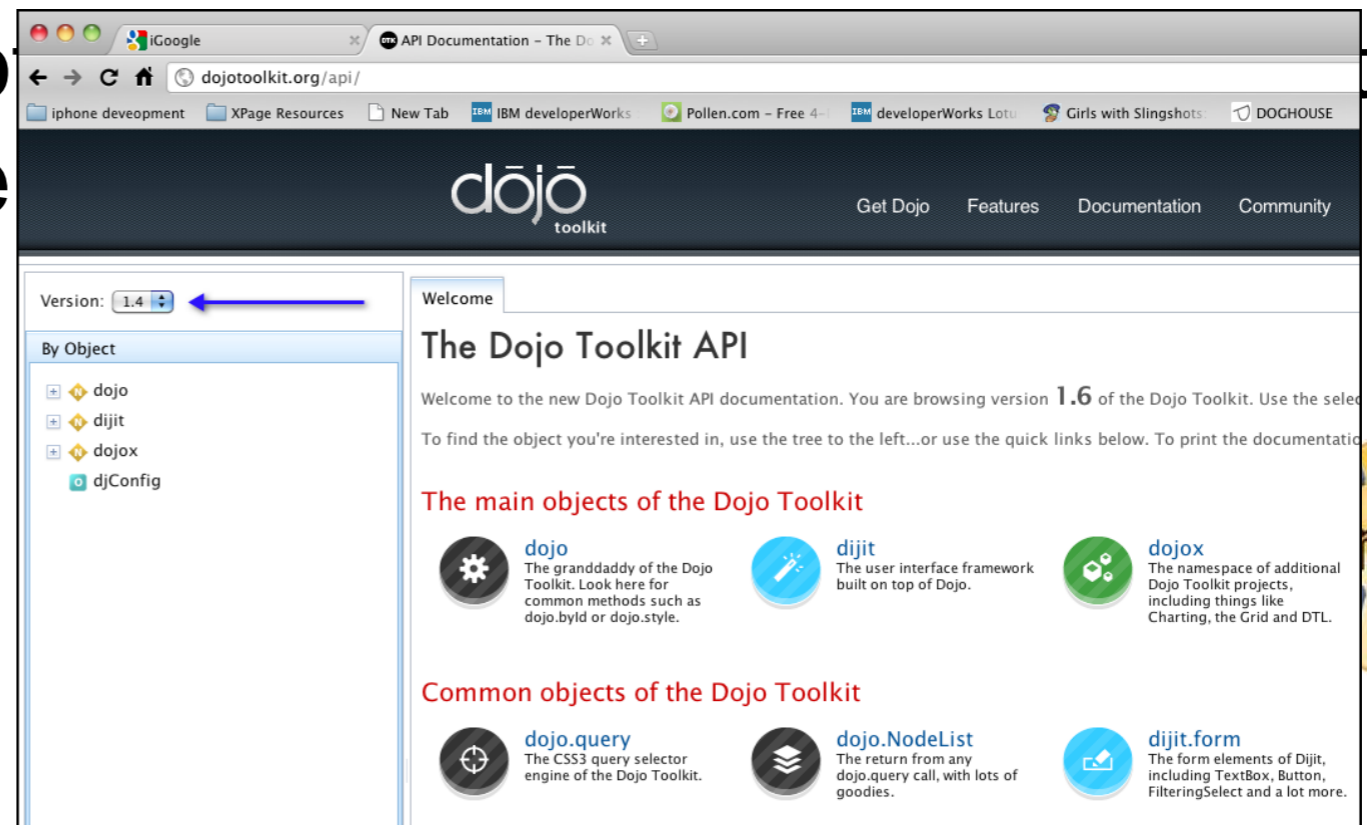

One UI version 2

- The Extension Library does not REQUIRE the use of the One UI Layout, but developers should at least investigate the benefits of using it
- See the Developerworks articles on the implementation of the OneUI layout controls
- http://www-10.lotus.com/ldd/ddwiki.nsf/dx/Demo_XPages_Extension_Library-Application_Layout__Page_Navigator_Controls

Dojo Controls

- Many of the Extension Library controls are based upon the Dojo widgets
- Adding these controls to an XPage can be initially frustrating as there is no “help” or documentation on the widgets themselves in the Extension Library or Domino Help
- To learn the properties of Dojo controls, visit the Dojo Documentation site
- Make sure you select the correct version for reference

A Practical Example

- A Practical Example of an application using the Extension Library

What we are going to talk about

- Installing the Extension Library
- Configuring DDE to test Extension Library Pages
- Developing XPages with the Extension Library
- **Deploying Extension Library Apps to the Domino Server**
- Wrap up

The Biggest Obstacle

- Unfortunately the biggest obstacle to deploying extension library applications to the Domino Server is NOT a technology issue, but a human one
- I HIGHLY recommend that you find out what the policy in your company is for deploying code to the servers
 - The Extension Library is comprised of a set of .jar files that must be deployed to the Domino Server
- If the EA's * will not let you deploy the Extension Library jars to the server then developing code with the Extension Library is just an exercise in what could be
- There is a template on OpenNTF (New Update Site) that makes this process a little more palatable

Domino Server Configuration

- Applications built on top of the extension library will only execute on a Domino Server where the Extension Library has been deployed
 - This may seem like a no brainer, but after testing “locally” this step is OFTEN looked over
- The Domino Server security has to be configured for executing XPages
 - Again, this may seem like a no brainer, but if this hadn't been the resolution over a dozen times to the “My Extension Library Applications don't work” problem, I wouldn't be sharing it with you

What we are going to talk about

- Installing the Extension Library
- Configuring DDE to test Extension Library Pages
- Developing XPages with the Extension Library
- Deploying Extension Library Apps to the Domino Server
- **Wrap Up**
